YANKS PEAK PROJECT

CARIBOO GOLD DISTRICT / BRITISH COLUMBIA

Historical geology + mineral claims

Original 1:50,000 GSC mapping / Supplied 2026 YellowBrick mineral outline

CLAIM OVERLAY

2026 mineral outline

No claim fill: the underlying geology remains visible. Internal exclusion preserved.

KEY LOCAL UNITS — 1988

- HR Ramos succession
- HKE Keithley succession
- PHR Harveys Ridge
- PGP Goose Peak
- HPS Undivided Snowshoe

~90.6% of supplied footprint has detailed source mapping. Hatched southwest: unmapped.

This is the 1988 GSC mapping, not the unregistered 1954 Holland plate.

Registration: printed graticule, inferred NAD27 (datum unconfirmed; alternative differs ~80 m). Historical positions approximate, locally order 100 m; not a survey bound. Geological contacts may be more uncertain. No mapped contacts or mineralized bodies have been extrapolated into the southwestern source gap.

Geology: L.C. Struik (1988), GSC Maps 1637A / 1638A, Swift River / Cariboo Lake; DOI 10.4095/126426 and 10.4095/126425. Open Government Licence–Canada.
Claims: supplied 2026 GeoPDF, not independently verified title. EPSG:32610. Original source colours, unit names and structural interpretation retained.
